

Index to Volume 40

The index to Volume 40 is composed of three parts: a subject index, an author index, and an advertising index.

The subject index is made up mainly of terms constructed by *International Pharmaceutical Abstracts*. The IPA index is an alphabetical, open-ended, controlled-vocabulary index that makes use of standardized headings. (The primary index terms for each article are listed routinely in the *Journal* as "index terms" following abstracts.) IPA covers all authored papers in *AJHP* as well as selected letters, editorials, and news reports. Items that were published in the ASHP Reports section, including official ASHP statements and guidelines, are indexed under "American Society of Hospital Pharmacists." The subject index also notes all regular *Journal* columns and, under the respective column headings, the titles of items in the "Management Consultation," "Questions and Answers," "Editorials," and "Book Reviews" sections; the items covered in "Equipment and Supplies"; the individual reports from affiliated chapters in "ASHP Affiliates"; and the titles of individual stories in "News." Under "News," items covered in "Appointments and Promotions" and in "News Briefs" are listed after those subheadings. The subject index also contains, under the heading "Correction Notices," the title and issue of publication of items for which corrections were printed, as well as the page numbers on which the corrections appear.
